

thyssenkrupp Elevator Technology

Thyssenkrupp Touchless Technology

thyssenkrupp

Touchless Call System

Operate the elevator without physical contact

Applications include:

Residential

Hospitals

Aged Care

Education

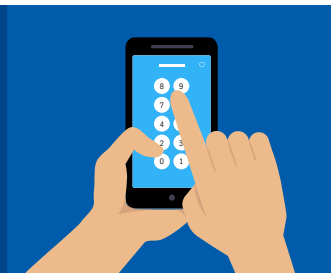

Retail

01

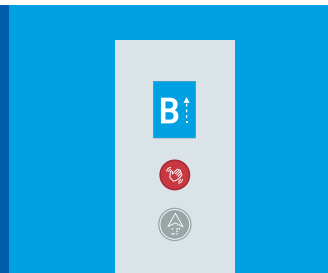

Scan the QR code located at the landing button panel or download the thyssenkrupp **Elevator pass** app using smart phone

02

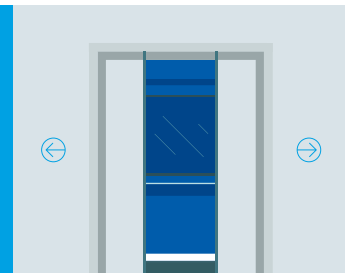

Using a smart phone, select a destination floor on the virtual floor table and a QR code will appear

03

Use touchless sensor on landing button panel to call elevator

04

Enter elevator and present the QR code on smart phone to the camera to select destination floor

Elevator pass app
available on Apple
Store and Google Play

How does it work?

On Landing:

The user activates touchless sensors on the landing to call the elevator.

In Elevator:

For Low to mid-rise buildings

The user activates the touchless sensors on the corresponding floor to select their desired destination.

For high-rise building

The user displays their QR code to the camera installed in the elevator car operating panel which will then automatically register their desired destination.

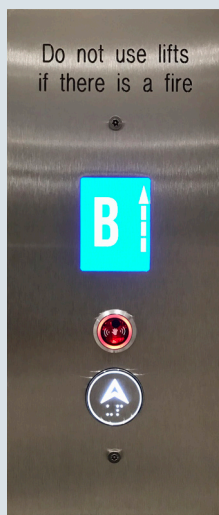

Contact with surfaces can be avoided and the risk of contamination from infectious diseases such as COVID-19 is reduced.

Elevator compatibility

Touchless Call System technology can be seamlessly installed on most brands and technologies including Otis, Kone, Schindler and many other independent elevator companies.
