

# EVOLUTION 100 CAB DESIGN

## A timeless aesthetic that's easy to clean

Designed for low- to mid-rise buildings, our evolution 100 pre-engineered MRL elevator offers the quality you expect from TK Elevator along with an easy installation, energy-efficient performance and our next-generation service and maintenance.

A signature evolution 100 component is the stainless steel elevator cab. It provides a timeless design while being easy to clean and sanitize. Energy-efficient LED lighting comes standard and automatically turns off when the elevator isn't in use.

## Cab accessory options

### Ceilings

#### Downlight

Metal pan downlight ceiling features LED lighting with six or nine lights (based on cab size.) Lights are mounted in stainless steel ceiling panels.

### Handrails

1½" cylindrical handrail is a continuous metal form with ends turned toward the wall. Comes in stainless steel finish.

### Sills

Our sill finishes allow you to match your sills to any other design component inside the cab.

### COP and front return Car operating panel

- Faceplate in brushed stainless steel
- Position indicator displays car location with matrix of blue LED-illuminated dots

### Wrap-around return

This return features a hinged car operating panel and separate filler panel.
